- iii. Never permit the fitting body to rotate during tube end make-up, use two wrenches. Assemble port connectors to components first and hold with a wrench while making up the tube joint. All types of union bodies must be held while each of the tube ends is made up.

--

- Never attempt to make up by torque.
- Always turn the nut the prescribed amount regardless of torque required. Fitting end plug requires only 1 -1/4 turn from finger tight make up in all sizes.

C. REMAKE OF FITTINGS:

A disassembled joint can be remade, simply by retightening the nut to the position of the original make up. For maximum- number of remakes, mark the fitting and nut before disassembly. Before retightening, make sure that the assembly has been inserted into the fitting until the ferrule(s) seats in the fitting. Retighten the nut by hand. Rotate the nut with a wrench to the original position as indicated by the previous mark lining up. (A noticeable increase in mechanical resistance will be felt indicating the ferrule is being re-sprung into sealing position.). Then snug the nut 1/12 turn (1/2 hex flat) past the original position.

D. PURGING AND COMMISSIONING

Contractor shall assist in commissioning the complete system including nitrogen purging. Supply of all manpower, equipment etc., for commissioning activity is in scope of Bidder. Contractor shall submit a detailed procedure for Owner/Consultants approval.
